

An effective Help Desk, Service Request or Case Management System is becoming a critical success factor in a growing number of organizations.

Businesses are constantly trying to find a more efficient way of providing full and well managed support throughout the cycle of managing their customers - *this is where versaSRS HelpDesk can help.*

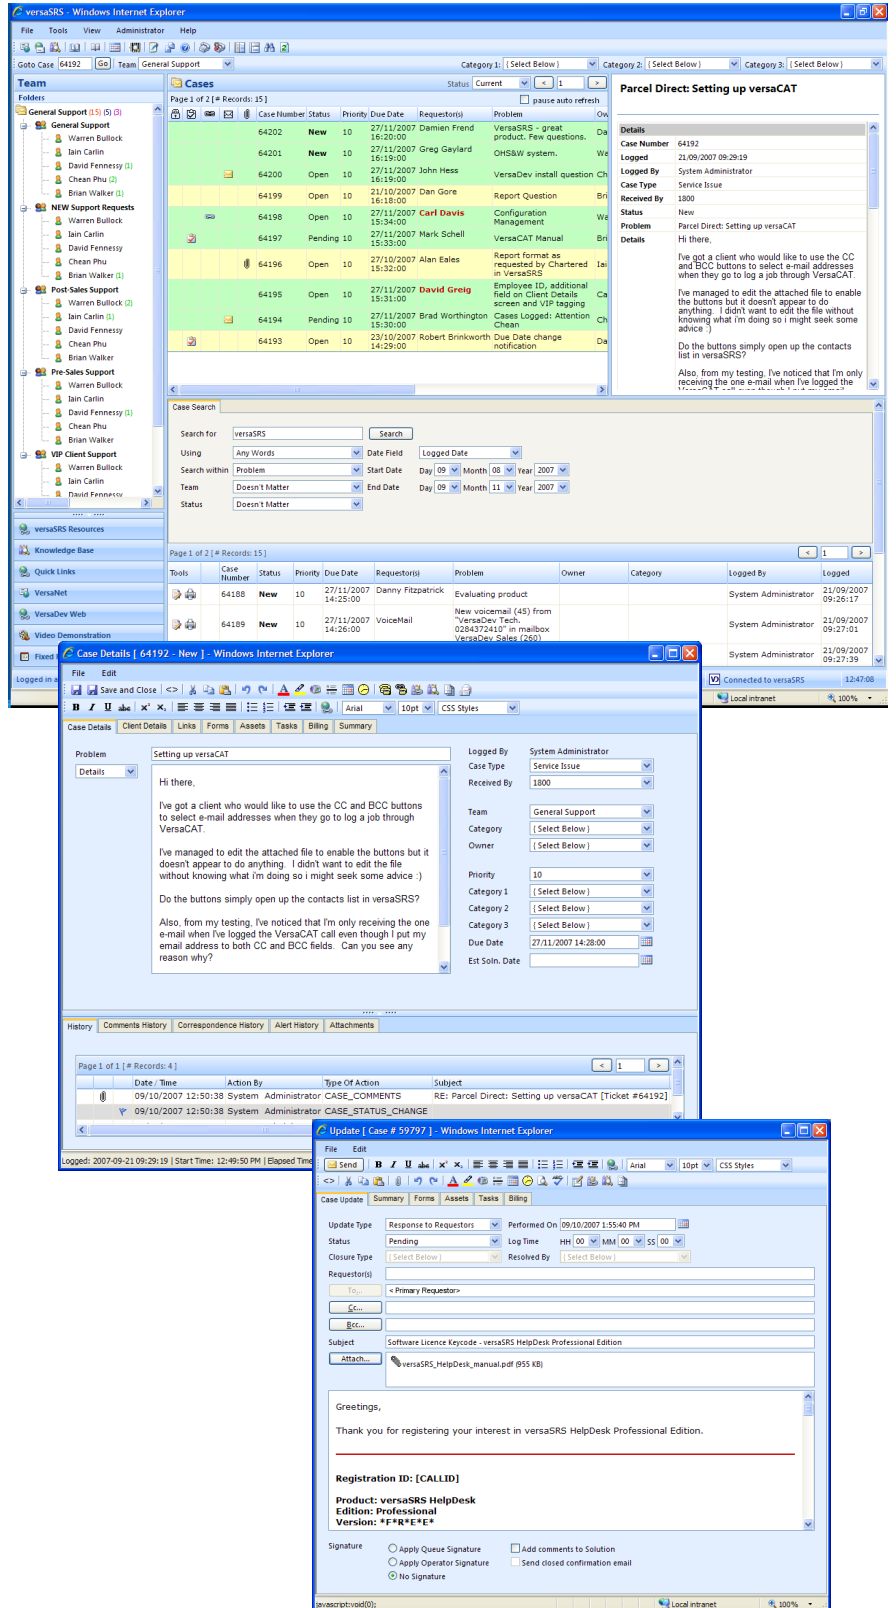

Whether to support clients or internal users, versaSRS HelpDesk is a packaged application enabling organisations to quickly and effectively deploy comprehensive Service, Incident, Configuration and Service Level Management processes with a minimum investment in infrastructure.

Based on the ITIL service management system (IT Infrastructure Library), and built using the Microsoft .NET Framework, versaSRS HelpDesk provides a flexible and scalable solution for managing service requests or case management processes and providing cost effective solutions to end users and customers.

Adaptable to a diverse range of business processes, versaSRS HelpDesk combines a browser-based interface with a database back-end globally accessible system.

What makes versaSRS HelpDesk stand out from the crowd is its unique 'look and feel'. Although a browser-based application, versaSRS HelpDesk does not look like a traditional Webpage. Instead, it has been designed to look, behave and work as a desktop application, providing the benefits of an intuitive interface with the latest advancements in browser technology.

Unlike other products on the market which use a single web page to deliver content, versaSRS HelpDesk has been developed with a multi-document interface that simulates a Windows environment providing a rich desktop style user experience, similar to familiar Microsoft Office products.

'... We have found the solution extremely easy to install, configure and customize but the most amazing aspect of the product is its rich and user friendly interface.

In a world where the consumer has come to expect a trade off with web based systems between ubiquitous access and a rich user interface, the versaSRS system clearly demonstrates that a web based application can be just as rich as any native application, with the added benefit of being easily accessible for customers and support representatives while also being centrally managed. ...'

versaSRS HelpDesk is adaptable to a diverse range of business processes, combining a browser-based interface with a database back-end globally accessible system.

versaSRS HelpDesk is available in 4 editions: Community (Free), Standard, Professional, and Enterprise.

The features of each edition make **versaSRS HelpDesk** available to a wide range of businesses requiring a scalable solution, without the huge price tag.

A detailed feature comparison between the editions can be found here:
www.versadev.com/versasrseditions.aspx

A fully functional free version of the **versaSRS HelpDesk** can be easily downloaded and installed, enabling you to try the software before you buy. The only restriction is in the number of queues available which can be expanded at any time by applying a keycode to the software after purchase of license fees. This removes the need for re-installation or other setup constraints and enables you to download, install, evaluate and activate **versaSRS HelpDesk** in a fluid and seamless process.

VersaDev also offer an online web demo version for those businesses wishing to quickly trial the system without installing any software.

For more information please visit our **versaSRS HelpDesk** website at www.versasrshelpdesk.com
